

Every Friday, we are going to have a more creative, practical maths lesson based on what you have learned this week.

We recapped some key vocabulary and symbols throughout this week and I would like you to create a poster that explains what it all means.

In your poster, I would like you to include:

- Ascending
- Descending
- $<$
- $>$
- $=$

Some ideas:

If I were creating this poster, I would draw mountains with someone skiing down to show descending and getting a ski lift up to show ascending, I could write numbers along the side of the mountains to show them getting larger or smaller. I might also make the mountains using the $<$, $>$ symbols.

It doesn't have to be like that, you can just write the vocab and symbols then explain what they mean in writing, Do whatever will help you to remember what they all mean.

Have fun 😊

Afterwards, you can play maths games on [Timestables.co.uk](https://www.timestables.co.uk), hit the button and mathletics.
