

First, begin the lesson by completing a simulation of the year 4 multiplication test.

You have 25 random times table questions to answer and you are given 6 seconds to answer each one. Try not to use any times tables sheets/ resources to help you, we need to be fluent by now!

Lesson:

Today, we are going to be finding halves and quarters of different numbers and write the answers as fractions and decimals. Please watch the video on the website and answer the worksheet questions in your book. Just do as many as you can in the given time.

After you have completed your work, play some times tables games or go on Mathletics! 😊
